

Integrated Digestive Care Screening. Prevention. Intervention.

As one of the top five largest independent gastroenterology groups in the nation with over 65 providers and 25 locations in the Greater Tampa Bay area, we offer an array of services to provide an integrated patient experience in the office, affiliated ASCs, and all hospital systems in the area.

Our Services

Specializing in conditions of the esophagus, stomach, liver, gallbladder, pancreas, and colon.

G.I. Screening & Treatment

We provide detection and treatment of common digestive disorders including colon cancer, esophageal cancer, Crohn's & Colitis, irritable bowel syndrome (IBS), inflammatory bowel disease (IBD), diverticulosis, reflux disease (GERD), office infusions, gallstones, hepatitis, and more. We also offer free hepatitis C screenings at all locations.

Pathology

To ensure timely and thorough biopsy results, Gastro Florida has its own fully CAP accredited anatomic pathology lab. The treating physician is contacted immediately for suspicious results.

Pharmacy

Whether it's commonly-prescribed, expensive specialty IBD or hepatitis medications, or a customized compound medication, our in-house pharmacy services assist patients in finding affordable and effective medications which can be picked up or mailed. Additional STD patient education is offered for patients who are immunocompromised from their condition or medications.

Nutrition & Weight Loss Services

Using a multi-step, progressive approach, our providers and on-staff dietitian utilize customized meal plans, supplements, weight loss medications, bariatric endoscopy, fatty liver treatment with imaging, and personalized check-ins to help give patients the support they need during their health journey. Our goal is to combine these therapies and limit more invasive interventions when possible.

Gastro+ Connected Care

This chronic care management program provides regular telephonic health monitoring between office visits. Patients are paired with a Care Navigator who will check in, monitor their symptoms, answer questions, and offer ongoing support and education. This proactive approach helps prevent complications and reduces the risk of discomfort or costly hospital visits.

Clinical Research

We participate in a variety of clinical research trials, including national leaders in some G.I. studies, to give our patients access to the latest treatments before they are widely available. These trials do not require any monetary cost to the patient and could offer a new treatment option when other methods have not worked.

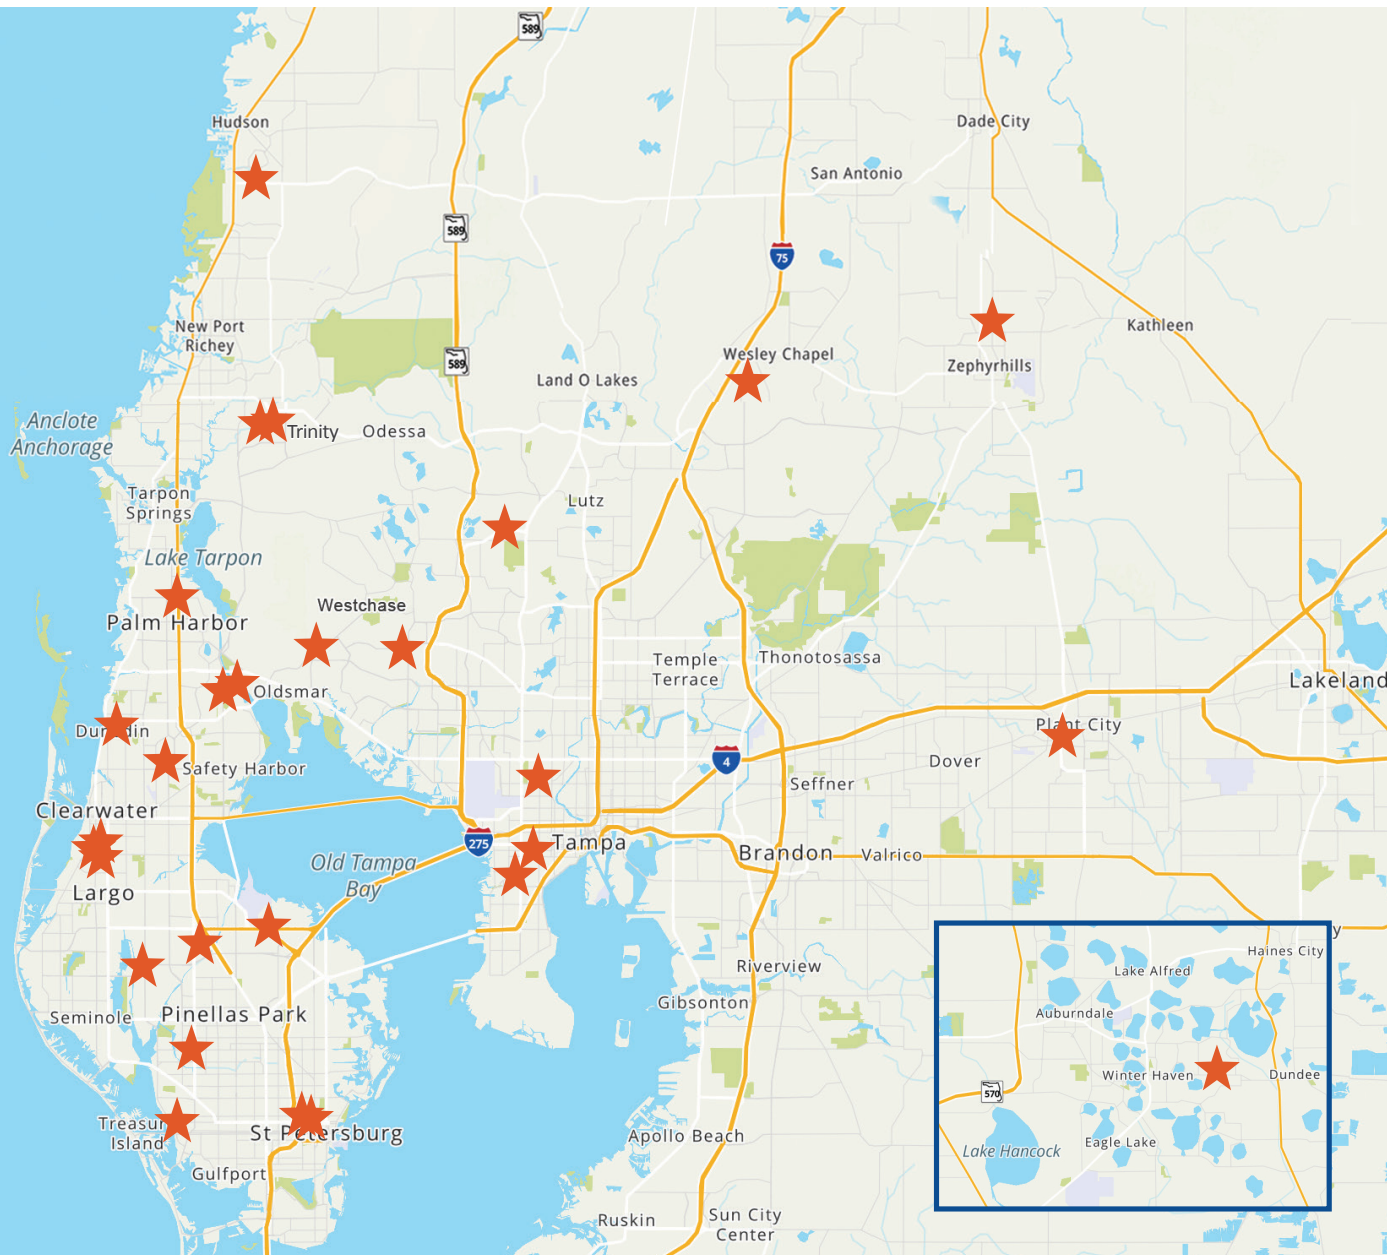

Advanced/Interventional G.I. Services

Several of our physicians have received additional training for advanced endoscopic therapies, including oncological therapy, with minimally invasive techniques to avoid longer recovery from traditional surgery.

Our Clinic Locations

Affability, Affordability, Access, Answers & Accuracy

Our clinics offer comprehensive integrative digestive care, emphasizing preventative measures such as colon cancer screening through colonoscopies — the gold standard for detecting and preventing colon cancer by removing suspicious tissue. Cases are performed in the office at select locations, affiliated ASCs, or if necessary, at community hospitals. Biopsies are coordinated with our in-house pathology lab or with external partnering labs.

Appointment Availability

Availability within a few weeks at select locations.
To request an appointment, please visit our online appointment request form, give us a call at **(727) 347-0536**, or email us at **service@gastrofl.com**.
